1. Start UTM and i pressed *esc* for choosing the UTM version -> see pic one ("local" connection)

2. I pressed **e** and selected with the arrow keys the second entry **kernel** ...

3. Pressed again e and I typed: init=/bin/bash and pressed Enter

## The following screen ...

And I pressed **b**System was booting

4. I typed *passwd loginuser* and I choosed the password: *ClosedDoor* – also the same for root, see pic 6

```
*** Control of the Control of the Control of Product and Product a
```

5. *Ctrl + Alt + Ent* for the reboot

```
ill configuration is done with Wohldmin. Go to https://192.168.2.188:4444
in your browner.

92.168.2.188
ogin: root
'sameral:
ogin incorrect

iia.moso.com login:
```

6. Login as root with ClosedDoor PW

```
ill configuration is done with WebAdmin. Go to https://192.168.2.188:4444.n your browser.

92.168.2.188
ogin: ClosedDoor_
```

7. Login incorrect ... I tried it with different keyboards and I typed the password as the login name to see is everything ok with the keyboard and the language layout – it was fine – but still login incorrect, maybe I have too "safe" it because of the reboot?
