

1 SPX Configuration

On the *SPX Encryption > SPX Configuration* tab you enable SPX encryption, and you configure general settings for all SMTP users.

To configure SPX encryption, proceed as follows:

1. **Enable SPX encryption.**
Click the toggle switch.

The toggle switch turns green.
2. **In the following sections of this tab, make the required global settings.**
3. **On the *SPX Templates* tab, modify the existing Sophos Default Template and/or add new SPX templates.**
4. **On the *SMTP > Global* tab, select the global SPX template.**
5. **Optionally, if using SMTP Profile Mode, select the desired SPX templates for the respective SMTP profiles.**
6. **If you want the users to SPX encrypt email messages via the Microsoft Outlook plugin, make sure that they have access to the the *SPX xxx* tab in the User Portal. If you use other another email messenger you have to set the Header manually by yourself.**

SPX Password Settings

Minimum length: The minimum number of characters allowed for a password specified by the sender.

Require special characters: If enabled, the password specified by the sender has to contain at least one special character.

Click *Apply* to save your settings.

SPX Password Reset

Reset password for: Here you can delete the password of a recipient. Enter the recipient's email address and click *Apply*.

SPX Portal Settings

Interface used for SPX reply portal: Select the interface that provides the SPX reply portal. This web interface allows recipients of SPX encrypted messages to securely reply to the sender. In many configurations this would be the external interface.

Port: Enter the port on which the SPX reply portal should listen.

Click *Apply* to save your settings.

SPX Portal and Password Expiry Settings

Allow secure reply for: Specify for how long the recipient of an SPX encrypted message is allowed to send a reply via the SPX reply portal.

Keep unused password for: Specify the expiry time of a password that was not used meanwhile.

Click *Apply* to save your settings.

SPX Notification Settings

Send notification on error to: Specify whom to send a notification when an SPX error occurs. You can send the notification to the administrator, to the sender, or to both, or you can send no notification at all. Error messages will always be listed in the SMTP log.

Tip – SPX error messages can be customized on the *Management > Customization > Email Messages* tab.

Click *Apply* to save your settings.
